

GUJJULA RAVI KIRAN

Machine Learning Engineer

+91-8688544959 | gujjularavikiran725@gmail.com | Bengaluru / Hyderabad (Open to Relocate)
[linkedin.com/in/gujjula-ravikiran-4249003aa](https://www.linkedin.com/in/gujjula-ravikiran-4249003aa)

CAREER OBJECTIVE

Machine Learning Engineer with 1 year of experience building data-driven and GenAI solutions. Skilled in RAG pipelines, agentic AI workflows, classical ML, and MLOps on Azure. Seeking to leverage expertise in LangChain, LangGraph, Azure OpenAI, and responsible AI practices to deliver measurable business impact.

TECHNICAL SKILLS

Languages	Python, SQL, Git, HTML/CSS
Machine Learning	scikit-learn, XGBoost, LightGBM, SHAP, MLflow, AUC/F1 evaluation, imbalance handling
NLP & Deep Learning	Prompt engineering, structured outputs (JSON), context windows, VGG16, CNN, OpenCV
Generative AI	RAG, Embeddings, Hybrid retrieval, Chunking strategies, Citations, Guardrails
Agentic AI	LangGraph, LangChain, LlamaIndex, Tool/function calling, ReAct-style orchestration, Pydantic
Data & Libraries	Pandas, NumPy, Matplotlib, FastAPI, EDA, Feature engineering
Cloud & MLOps	Azure OpenAI, Azure AI Search, MLflow, Experiment tracking, Retraining pipelines

KEY RESPONSIBILITIES & CONTRIBUTIONS

- Designed and delivered GenAI solutions using RAG patterns with grounded responses, citations, and fallback behavior.
- Implemented chunking, metadata filters, and evaluation sets to improve answer faithfulness and relevance.
- Built agentic workflows with tool/function calling, routing, and verification steps for multi-stage business tasks.
- Defined tool schemas and structured outputs to improve determinism and reduce hallucination risk.
- Engineered prompts for consistent JSON outputs and safe responses with content and policy guardrails.
- Applied prompt versioning and offline tests to measure quality, latency, and cost trade-offs.

WORK EXPERIENCE

Machine Learning Engineer — VisionQuest Solutions Pvt. Ltd., Bengaluru

Aug 2025 – Present

- Designed and delivered GenAI solutions using RAG patterns with grounded responses, citations, and fallback behavior.
- Built agentic workflows with tool/function calling, routing, and verification steps for multi-stage business tasks.
- Engineered prompts for consistent JSON outputs and safe responses with content and policy guardrails.
- Applied prompt versioning and offline tests to measure quality, latency, and cost trade-offs.
- Developed classical ML classification models with robust validation, leakage checks, and threshold optimization.
- Delivered SHAP-based explainability and translated results into measurable business actions.
- Implemented MLflow tracking for experiments and maintained reusable pipelines for training and batch scoring.
- Created data quality checks and monitoring signals for drift, missingness, and performance regression.
- Collaborated with stakeholders to translate requirements into measurable success metrics and acceptance criteria.
- Produced clear documentation for datasets, prompts, evaluations, and production behaviors for audit readiness.

PROJECTS

GenAI Shopping & Product Discovery Assistant (RAG)

Client: EComKart Retail (APAC) | Industry: Retail | Role: GenAI / Data Science Engineer

- Implemented RAG ingestion pipeline (catalog/FAQ), chunking strategies, and metadata-based filtering for relevance.
- Designed prompts for grounded answers with citations, refusal logic, and structured JSON outputs for UI rendering.
- Improved retrieval quality using hybrid search, reranking strategies, and query rewriting for ambiguous questions.
- Created offline eval sets (golden Q&A) and measured faithfulness/relevance to guide prompt and retrieval iterations.
- Integrated observability logs (latency/cost/error types) and established rollout checks for safe production use.

Tools: Python, Azure OpenAI, LangChain, Azure AI Search (Vector), Embeddings, Prompt Engineering, Key Vault

Agentic AI for Pharmacovigilance Case Triage

Client: NovaPharm (US) | Industry: Pharma | Role: Agentic AI Engineer

- Designed an extraction + routing agent that outputs structured fields (drug, event, dates) with schema validation.
- Added tool calls for terminology lookup and consistency checks to reduce extraction errors.
- Implemented confidence-based HITL gating for borderline cases and maintained audit-ready logs.
- Built regression tests with labeled samples to evaluate extraction accuracy and routing correctness.
- Optimized prompts for stability and ensured consistent formatting across model versions.

Tools: Python, Azure OpenAI, LangGraph, Structured outputs, Tool calling, Pydantic, Evaluation

Hospital Readmission Risk Classification

Client: HealthPlus Hospitals (MEA) | Industry: Healthcare | Role: Data Scientist

- Engineered features from encounters, diagnoses, and lab summaries and validated data consistency.
- Trained and tuned classification models using leakage-safe time splits and stratified evaluation.
- Optimized thresholds for operational capacity constraints and measured impact on recall for high-risk groups.
- Delivered explainability outputs and cohort-based error analysis to clinicians and operations stakeholders.
- Built batch scoring and monitoring metrics for data drift and performance regression.

Tools: Python, Pandas, scikit-learn, XGBoost, SHAP, MLflow, SQL

EDUCATION

Bachelor of Technology in Computer Science — St. Peters Institute of Higher Education
and Research, Chennai

Jan 2021 – Apr 2025

CERTIFICATES

- Completed a hands-on project focused on Python and web development.
- Gained exposure to frontend development using HTML and CSS.
- Project undertaken at VLOG Innovations.
